

NORBIT - iSTX360 -TURNKEY SOLUTION FOR DREDGING MONITORING

stationary surveys with 360 deg coverage

Compact and high-resolution curved array FM bathymetric mapping system for stationary 360 Survey.

This all-in-one tightly integrated broadband multibeam turnkey solution offers high resolution bathymetry over a wide swath for all dredging applications. The high-end sonar with Applanix WaveMaster II (globally leading GNSS/INS system) embedded into the unit ensures fast and reliable mobilization and highest quality sounding for surveys in all conditions. The system is tightly integrated to a titanium rotating system ensuring a full 360 deg stationary high-end survey capability.

The WBMS-series are based on a flexible sonar platform that utilizes the latest in analogue and digital signal processing. With broad R&D expertise NORBIT has developed, from the ground-up, exciting new technology that allows existing and new applications to benefit from the advantages offered by a compact wideband curved-array multibeam sonar.
