Caintech expand Hydrographic Services with purchase of NORBIT iWBMS

NORBIT are proud to announce the supply of an iWBMS (Integrated Wideband Multibeam System) to Caintech Ltd. With NORBIT iWBMS capability, Caintech will be benefiting from the latest generation sonar technology performance allowing flexible installation options for both vessel deployment and on their forth coming delivery of a Seafloor Systems EchoBoat USV.

With a truly fully integrated and tightly coupled multibeam survey system, the NORBIT iWBMS provides high data quality and ease of use for Caintech who will operate in often interesting and challenging environmental conditions. Benefiting from high resolution and wide coverage, the NORBIT system will be initially used for a number of marine engineering inspection applications.

John Fraser from NORBIT commented "Caintech are leading innovators of survey technology, and they demonstrate exacting high standards in all their deliverables. We are delighted that after some trials, the Jim and his team have chosen NORBIT technology to contribute towards Caintech operational growth. The NORBIT team provide professional client focused support and we look forward to working
